## **DETAILED ACTION**

### **Reasons for Allowance**

The following is an examiner's statement of reasons for allowance:

The prior art does not anticipate nor render obvious the combination set forth in the independent claims, and specifically does not show a method of regeneration of a cryopump comprising: a temperature increasing, a vaporizing step, a water discharge step, and a water vapor discharging step as claimed at a temperature of at least 273K. Bartlett teaches partial regeneration, or regeneration with the cryopanel at lower or cryogenic temperatures and not a room temperature. Bartlett explicitly teaches that partial regeneration is desirable for providing a smaller down time (column 2, lines 23-25). Therefore, Bartlett teaches away from full regeneration at room temperature. On the other hand, the admitted prior art (shown in the current application's figures 3-4) shows full regeneration at room temperature as a known means of regenerating a cryopump and removing adsorbed and solidified gases, however, the admitted prior art does not teach performing a plurality of evacuation steps at pressures between a third and a fourth pressure as claimed. Therefore, the prior art does not make obvious the claimed process of full regeneration at room temperature in combination with a plurality of evacuations between the third and fourth pressure as presently claimed. It is noted that further searching and continued examination for this claimed invention has not yielded any closer prior art and therefore the claimed invention is considered allowable. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany

the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
